With 25 Years of System Experience, We Value Your Needs

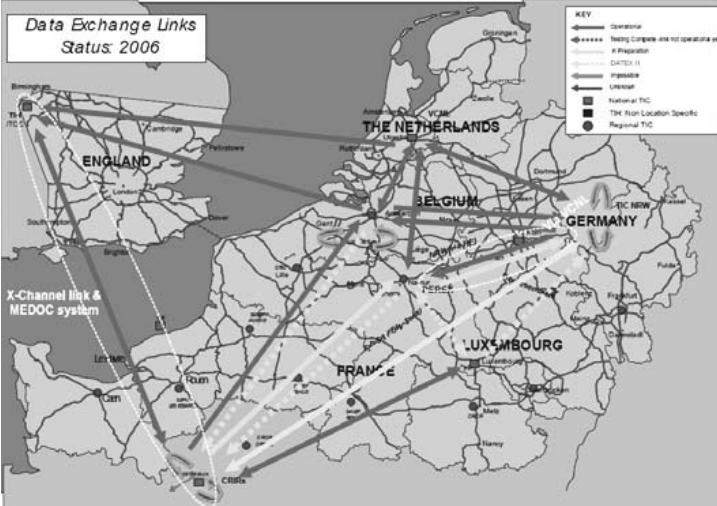

REFERENCE SAMPLE PROJECT

Centrico Consulting

Highways Agency, UK

→ Providing Consultancy services for the English Highways Agency to establish a cross-border data exchange network in the Centrico Euregio

With its 2001 entry into the Euregio Centrico, the English Highways Agency took the lead in the traffic centre activity domain. The key task was to expand cross-border data exchange among the member traffic management centres from the Benelux Countries, Germany, England and France. Specifically, this included the deployment of available interface standards (primarily DATEX) among Centrico partners as well as feeding back Centrico experiences, suggestions for future improvement and requirements.

The Highways Agency has entrusted Heusch/Boeseveldt, under subcontract to the consulting firm of Faber Maunsell Ltd., with the technical execution of this challenging assignment. Among the main tasks was leading the specially set-up Data Exchange Forum as well as representing Centrico on the DATEX Technical Committee. The success of these activities was instrumental for the DATEX Network winning the 2006 Centrico “best cross boarder and international project“ award.

Our IT Consulting Complements your Traffic Engineering Know-how

→ Orientation in a sea of shortcuts

We tell you which technologies and tools you really need

→ Standards without remorse

We advise you on the profitable and targeted application of current and future standards

→ Coordination with success

We help you make the right arrangements with your external partners

→ Support where you need it

With over 25 years of implementation experience, we don't neglect you during the implementation phase

OUR SERVICES

- requirements analysis, conceptual design and architecture of intelligent traffic systems – with focus on external interfaces/networking and data modelling
- project support: coordination, agreement with partners, customers and contracting bodies or funding authorities
- technical consulting and committee participation
- advice on standards and standardisation support
- technical support for implementation: design of application profiles, training and help desk
- implementation support for the introduction of new information and communication paradigms like Service Oriented Architecture (SOA) or modern WEB 2.0 user interfaces
